

Energy independence is not just an economic issue—it's a matter of national security. We should never have to rely on foreign governments, especially those who do not share our values or support our way of life, to power our homes, businesses, or economy.

To secure our energy future, I support an “all of the above” strategy—one that embraces innovation, leverages our abundant natural resources, and invests in a diverse mix of energy sources. That includes wind, solar, nuclear, oil and natural gas, hydroelectric power, and geothermal energy. Each has a role to play in building a resilient and affordable energy system.

But energy production alone is not enough. We must modernize our aging energy infrastructure—starting with streamlining the permitting process, upgrading our electrical grid, and expanding energy delivery systems. In particular, ensuring reliable access to natural gas is vital for both economic growth and heating homes across our state.

A smarter, faster, and more secure energy system will drive down costs, protect consumers, create good jobs, and keep us free from foreign energy manipulation. I will work to make that vision a reality.
